Frontiers in Speech Processing Robust Speech Analysis '93

This CD reflects the cooperative efforts of 28 researchers who attended the 1993 summer workshop in speech processing hosted by the Center for Computer Aids for Industrial Productivity (CAIP) at Rutgers University and sponsored by the National Security Agency. The workshop was an outgrowth of summers at the Center for Communication Research in Princeton (CCR-P) and targeted problems concerning general-purpose speech recognition with particular emphasis on front end processing. The project was held from July 6th to August 13th and utilized extensive computational resources: both equipment native to CAIP and additional hardware acquired for the workshop. As planned from the beginning, all workshop efforts have been made public and are available on CDROM disc and via anonymous FTP from frontier.rutgers.edu.

This CDROM is in ISO9660 format and may be be used on many CDROM capable systems. Due to the file naming limitations of the ISO9660 format each directory has been archived using 'tar' to preserve any filenames that source code and documentation may depend upon. Please see files ending with '.LST" for a complete list of the contents of these archive files. The archive files may be extracted using the command 'tar -xvf <filename>.tar'. (source for this utility has been included and may be found in /src.)
